

Case History no. 22 – Compact Duplex Easy to Service Cartridge Filter into Freezer to Minimise Operator Exposure to Fluid

Problem:-

A customer filters a noxious fluid through duplexed double open-ended cartridges where the housings are housed within a refrigerated box.

They need to minimise operator exposure to the fluid.

Solution: -

We supplied single open-ended code 3 plug in cartridges which take less time and are far easier to change than double open-ended types where you have to undo a cartridge retaining nut and remove the cartridge from a tie rod.
